

TERRACOTA

Three-dimensional channel letters, **0.90 m high**, made of highly durable, **water-repellent concrete**, in a **creamy white color** with a **terracotta finish**. Designed for direct installation on compacted ground, each letter incorporates an **integrated concrete base** that allows anchoring by embedding it in a **200 mm deep trench**, guaranteeing stability and structural resistance.

The system optionally allows for the **integration of LED lighting**, highlighting the letters and improving their visibility both at night and in low-light conditions. The assembly offers high weather resistance and minimal maintenance, making it suitable for public and outdoor spaces.
