Fence

METALICA DE COLORES

The Fence is composed of modular sections measuring 2,100 mm long and 1,200 mm high, constructed of iron with a tubular perimeter frame and interior vertical bars in alternating colors. All metal elements are treated with FERRUS, an anti-corrosion treatment using galvanization and subsequent thermosetting powder coating, ensuring strength and durability against the elements. The design is intended to delimit children's play areas, ensuring structural robustness and safe use. The construction and features comply with the requirements established in the UNE-EN 1176 standard for playground equipment and areas, ensuring regulatory compliance and safety for installation in public spaces. Recommended anchoring: Recessed base +/- 300mm.

Steel with FERRUS treatment: an iron protection process that ensures optimal corrosion resistance. The Ferrus treatment consists of three layers applied after cleaning all dirt and impurities using shot blasting, and it involves an electrolytic bath followed by an epoxy primer and a final coating of polyester powder paint.
